

IN THE SPECIFICATION

Please replace the Abstract with the following rewritten paragraph:

~~SYSTEM AND METHOD FOR PERFORMING
AUTO-COMMISSIONING IN
A TWO-WAY SATELLITE SYSTEM~~

ABSTRACT OF THE DISCLOSURE

~~An approach for performing a~~ Auto-commissioning over a two-way satellite network is ~~disclosed. A performed, where a~~ transceiver transmits and receives signals over ~~the a~~ two-way satellite network. An antenna is coupled to the transceiver, and a ~~A~~ user terminal is coupled to the transceiver ~~and executes~~ to execute a setup program. The program instructs a user to point the antenna to a beacon satellite using predefined pointing values based upon the location of the antenna. The user provides user information over a temporary channel that is established via the beacon satellite to a hub. The hub downloads network configuration parameters and antenna pointing parameters to the user terminal, and the ~~The~~ user selectively re-points the antenna based upon the downloaded antenna pointing parameters. The user terminal is configured based upon the downloaded network configuration parameters, without the need to employ a separate terrestrial link.
